The Most Delightful New **Hardy Garden Chrysanthemums** *from Seed*

1945 September Jewels HP

September Jewels start blooming early in September from seed sown in early spring and continue to give a magnificent display until the middle of October. They develop into well-rounded plants from 1 to 2 feet tall simply covered with masses of flowers which are resistant to light frost.

Many Glorious Colors

The large daisy-like flowers show a distinct tendency toward a double row of ray petals. They measure 2 to 3 inches in diameter and come in an extra-wide range of indescribably beautiful colors tending more toward delicate tones yet with sufficient of the more rugged shades to give a rich color balance. They are excellent for garden display and unsurpassed for cutting. Of easiest culture and the plants will last for many years.

Pkt. 60c.

Explanation of Symbols

The symbols used throughout this book are bound to help you with your garden planning. They make it easy to tell at a glance the character of the plant and their adaptability to various growing conditions.

(A)=Annual. Annual flowers complete their life circle within one growing season. They must be sown every year.

(B)=Biennial. These require two years to bloom. Seed sown during one season will produce flowering plants the second year. Occasionally they live longer than two years.

[HHP]=Half-Hardy Perennial. These cannot stand much frost but may be kept alive by bringing indoors, placing in the cold frame, or covering securely during the winter.

[HP]=Hardy Perennial. These last for several years, withstanding considerable frost provided the soil is well drained.

[TP]=Tender Perennial. Tender perennials may be kept growing throughout the year in the house or greenhouse. Many of them are showy bedding plants for a summer and fall display.

§=Climbing Plants. Climbing and trailing plants which are best grown with a support on which they can climb.

△=Suited to Rock Garden. Most plants suited to rock gardens are also desirable for dwarf beds and borders. The smaller the rock garden the smaller the plants should be.

◎=Suited to Semi-Shade. Most plants suited to semi-shade also do well in a sunny exposure. Semi-shade means some sun for part of the day or a location where the plants receive ample indirect light from above.

●=Suited to Shade. Few plants do in dense shade but those marked in this way will be found quite satisfactory. There are no annuals which will bloom in deep shade.

+ Seeds marked with a + often are sown in late fall outdoors to germinate the following spring. Spring germination is quickest if they are placed in water and set in the freezing chamber of an electric refrigerator. To secure the beneficial effect of alternate freezing and thawing, thaw them out once a week and then freeze again. They will be ready for sowing after two to three weeks of this treatment.

Antirrhinum [®]

The Popular Snapdragons

Snapdragons are great favorites. They are easily grown from seed blooming continuously throughout the summer and fall. If protected during the winter, midsummer sowings will produce particularly fine flowers during the following spring. Just cover them with a bottomless box and a pane of glass over the top. The germination of Snapdragon seed has proved to be easiest if finely sifted coal ashes are used as a seed bed. Prepare your seed pan in the usual way and add a layer of finely sifted coal ashes ¼ inch deep on the top. Sow the seed thinly on top of the ashes and water carefully. Keep moderately moist in a fairly warm place until the seedlings appear.

Six Rust-Resistant Maximum Varieties

The development of these new Rust-Resistant Snapdragons is one of the greatest accomplishments ever made by plant breeders. It is possible now to have them grow to perfection even where the old strain has proved a complete failure due to rust infection. These new Maximum varieties grow about 3 feet in height and bear an abundance of long, strong flower stems set with giant blooms of perfect form. As they are highly Rust-Resistant, success with them is most certain.

Bush Lima Beans

Culture—Lima Beans are very susceptible to cold and seeds should not be planted until the ground has become thoroughly warm. Being gross feeders, they should be sown on well-enriched land, with the rows $2\frac{1}{2}$ feet apart, placing the beans six inches apart in the row, **eye down**. In light soil, cover about one inch deep, less on heavier soils. A good fertilizer applied at the rate of 20 pounds to every hundred feet of row, when the plants begin to bloom, will materially increase the yields. Hill plants slightly earlier in the season to hold the pods off the ground. **One pound will plant 50 feet of row.**

111 Dreer's Wonder Bush Lima

A most desirable Bush Lima Bean because it is extremely early and very productive. The plants are of strong upright growth, heavily laden with large pods many of which contain 4 beans each. Many gardeners pronounce the broad, flat beans superior in flavor to those of the round, thick-seeded varieties. We highly recommend it and suggest that you give it a thorough trial this year. Pkt. 10c; $\frac{1}{2}$ lb. 25c; lb. 40c; 2 lbs. 75c; 5 lbs. \$1.55, prepaid.

109 Henderson's Bush Lima. This is the popular Baby Lima Bean—a bush form of the Small or Sieva Pole Lima. It is grown extensively by those who prefer small sized beans. Pkt. 10c; $\frac{1}{2}$ lb. 25c; lb. 40c; 2 lbs. 75c; 5 lbs. \$1.55, prepaid.

107 Fordhook Bush Lima

This splendid variety is well known wherever Lima Beans are grown as it combines productiveness with choice quality. The plants make a vigorous, upright growth so that the pods are held well above the soil surface. This keeps them clean and avoids rust and rot even during wet seasons. The pods are borne in clusters which accounts for the productiveness of this splendid variety. Each pod is about 5 inches in length and contains 4 or 5 very thick, light green, oval beans which have a distinctive rich nut-like flavor quite unlike any other variety. Pkt. 10c; $\frac{1}{2}$ lb. 25c; lb. 45c; 2 lbs. 80c; 5 lbs. \$1.60, prepaid.

McCrea Bush Lima

Pole Lima Beans—For Extra-Heavy Crops

Culture—Pole Limas are even less hardy than the Bush type and should not be planted until toward the end of May or when all danger of frost is past. Set the poles about 4 feet apart each way and plant 6 to 8 beans, eye downward, around each pole. When plants are up, thin out to 3 plants to a pole. Pinch off the ends when plants overrun the top of the poles. It is good practice to use a shovelful of rich, light, well-rotted compost to each hill. **One pound of seed will plant 75 to 100 hills.**

117 Dreer's Improved Pole

The pods and beans are similar to the well-known Fordhook Bush Lima. It is a medium-late variety of strong growth, bearing a very heavy crop of attractive pods that shell out more beans from a given number of pods than any other Pole Lima. Each pod contains 4 or 5 thick and attractive, light green beans. Pkt. 10c; $\frac{1}{2}$ lb. 25c; lb. 45c; 2 lbs. 85c; 5 lbs. \$1.75, prepaid.

122 Leviathan Early. The earliest large-podded Pole variety in cultivation and an enormous cropper. The pods are 5 to 6 inches long and contain 5 or 6 beans each. The shelled beans are of excellent quality. Pkt. 10c; $\frac{1}{2}$ lb. 25c; lb. 40c; 2 lbs. 75c; 5 lbs. \$1.55, prepaid.

Pole or Running Beans

Culture—Pole Beans are vigorous growers and will produce a heavy crop of beans if grown on fertile ground which has been enriched with well-rotted manure or a complete fertilizer. As they are less hardy than the bush varieties start sowing about a week later. One pound for 100 poles or hills.

Appetizing, Crisp, Cool, and Refreshing

One ounce of seed will produce about two thousand plants. For an early supply start seed of an early variety indoors in flats during February. Cover with sand and keep moderately moist, because celery seed is rather slow to germinate. For a later supply start with a winter variety, sowing any time between the middle of March and April 1st. Celery requires a moderately rich, well-prepared soil to grow to perfection. Proper blanching before use is very important.

276 Golden Self-Blanching. A favorite early variety of compact growth suited particularly to home garden culture because it blanches readily. Medium-sized stocky plants with thick, solid, crisp stalks of distinct flavor. Has a beautiful compact clear golden yellow heart and is as flavorful as it looks appetizing. Pkt. 10c; $\frac{1}{2}$ oz. 35c; oz. 60c; $\frac{1}{4}$ lb. \$2.00.

269 Emperor. A splendid Celery for fall and winter use having exceptionally fine eating qualities. Of compact growth, about 18 inches high, with unusually crisp white stalks and a pale yellow heart which is crisp, brittle, tender, and has a delightful nutty flavor. Pkt. 10c; $\frac{1}{2}$ oz. 30c; oz. 50c; $\frac{1}{4}$ lb. \$1.50.

288 Utah Pascal. A favorite fall and winter Celery maturing about 10 days earlier than the once popular Giant Pascal. The plants are full hearted, compact, and the stems are crisp, solid, medium broad, and well rounded. Of extra fine quality and much in demand because of its high quality and attractive appearance. Pkt. 20c; $\frac{1}{2}$ oz. 55c; oz. \$1.00; $\frac{1}{4}$ lb. \$3.50.

Golden Yellow Sweet Corn

The yellow varieties of Sweet Corn enjoy particular favor with home gardeners who appreciate the delicate flavor typical to those which have a yellow color. 321 Golden Colonel. Seldom have we ★heard so many favorable comments about a new variety of Sweet Corn as in the case of Golden Colonel. Vanguard

318 The Famous Golden Bantam

Though many varieties of Sweet Corn have been introduced since Golden Bantam made its appearance none so far has surpassed it in sweetness and distinct buttery flavor. Pkt. 10c; $\frac{1}{2}$ lb. 25c; lb. 40c; 2 lbs. 75c; 5 lbs. \$1.65, prepaid.

Sweet or Sugar Corn New Disease-Resistant Varieties

Onion Seed

Ognon, FR.
Cipolla, ITAL.

Cebolla, SP.
Zwiebel, GER.

One ounce of Onion seed for 100 feet of drill, 5 to 6 pounds for an acre.

Culture—Seeds may be sown early in the spring in rows 18 inches apart, and as soon as seedlings are 3 to 4 inches tall they should be thinned out to stand 3 to 4 inches apart in the row. Pull when tops begin to die down, cure, and sell, or store in a cool, dry place. By sowing seed of the Spanish type, such as Prizetaker and the Southport Globes, under glass in February or March and transplanting in April to open ground 3 to 4 inches apart in the rows bulbs of immense size may be produced.

The Best Red Onions

The red-skinned Onions are by far the best winter keepers lasting well into the spring, far beyond the time that any of the white or yellow varieties could be kept in good condition. They mature rather late, have solid flesh, and their flavor is stronger than any of the others.

580 Large Red Wethersfield. A well-known variety with very large thick flat onions having a bright purplish red skin. Solid flesh, shaded pink near the skin. Pkt. 10c; $\frac{1}{2}$ oz. 30c; oz. 50c; $\frac{1}{4}$ lb. \$1.50; lb. \$5.00.

582 Southport Red Globe. The Southport Globe Onions are all very popular and this splendid red-skinned variety is no exception. The onions are perfectly round and have an attractive red skin and white flesh. Pkt. 10c; $\frac{1}{2}$ oz. 35c; oz. 60c; $\frac{1}{4}$ lb. \$1.85; lb. \$6.25.

The Leading White Sorts

The white-skinned onions are much milder in flavor than yellow or red ones but they do not keep so well.

584 Southport White Globe. A well-known and popular standard sort of medium size, perfect globe shape, with pure white skin. White, fine-grained flesh of fairly strong flavor. Pkt. 15c; $\frac{1}{2}$ oz. 40c; oz. 65c; $\frac{1}{4}$ lb. \$1.95; lb. \$6.50.

588 White Bunching. This variety does not form bulbs and it is grown exclusively for green onions or scallions. Sow the seed thickly in rows and earth up gradually to blanch the stalks as far up as possible. Pkt. 10c; $\frac{1}{2}$ oz. 25c; oz. 45c; $\frac{1}{4}$ lb. \$1.35; lb. \$4.50.

590 White Portugal or Silver Skin. Large, flat, pure white onions ready within 75 days. A good keeper, also valuable for pickling and bunching. Fine-grained flesh of mild and pleasant flavor. Pkt. 10c; $\frac{1}{2}$ oz. 35c; oz. 60c; $\frac{1}{4}$ lb. \$1.80; lb. \$6.00.

594 White Sweet Spanish

This is by far the largest of the Globe-shaped white varieties. It resembles in form and size the pale yellow Valencia except that the color of the skin is a pure transparent white. The flesh is firm yet tender and it has an exceptionally mild and sweet flavor. Under favorable conditions individual onions of astonishing large size can easily be grown. Even under average conditions they reach exceptional size. Yet they are always of sweet mild flavor. Pkt. 15c; $\frac{1}{2}$ oz. 45c; oz. 80c; $\frac{1}{4}$ lb. \$2.40; lb. \$8.00.

Garden Peas

Guisante, SP.
Erbsen, GER.

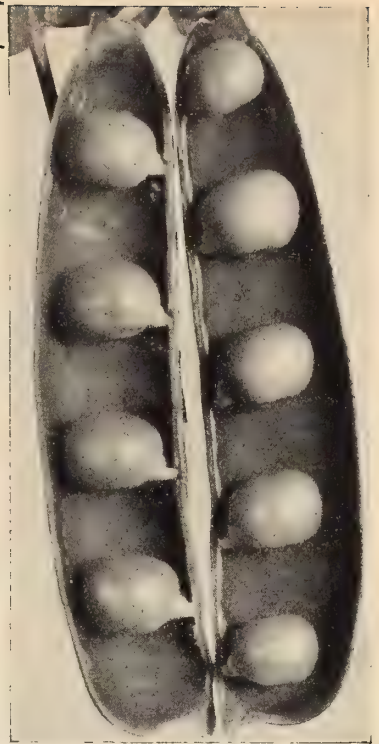

One pound will plant 100 feet of drill.

Smooth-seeded peas can be sown as early in the spring as the ground can be prepared. Subsequent frost does not hurt them. Sow in single or double row, 24 to 26 inches apart, covering the seeds about 2 inches deep. All wrinkled varieties are sown in the same manner, but the gardener must wait until all danger of frost has passed or otherwise the wrinkled seeds will rot. All varieties over 2 feet do better with support.

One ounce of seed will sow 100 feet of drill.

CULTURE—Earliest sowings may be made as soon as frost is out of the ground. Cover seed about $\frac{1}{2}$ inch. After May 1st, continue by sowing White Icicle. After June 1st, select White Strasburg and around July 1st, sow the late but also large Winter Radishes for a fall and winter supply. Hardy Shrubs

Shrubs are as much a part of the well balanced garden as a lawn or flower border. Many of them are as decorative as any ornamental foliage plant, while others are highly attractive on account of their flowers. In the well arranged shrubby border there always will be something of interest no matter what the season of the year. They have many uses such as a dividing line between the flower and vegetable garden, or between the lawn and uncultivated land beyond; as a background to a flower garden; for hiding an unsightly fence or foundation. As height varies according to condition we give the approximate height as follows: D=Dwarf (less than 4 feet tall); M=Medium (4 to 8 feet tall); T=Tall (8 feet and taller).

PLANTET The Complete Food for Water Culture

Plantet is a completely soluble balanced plant food for use in growing plants in water without soil which represents a very interesting and successful method of plant culture.

Equally good results are obtained where Plantet is used as a nutrient solution for plants being grown in sand, cinders, or soil. It is clean, odorless, and very economical, one rounded teaspoonful making one full gallon of solution.

(For Canada and Foreign, see below)

If undecided you may safely leave the method of transportation to our judgment, otherwise please state on your order whether they are wanted by express or freight.

Local Delivery—There is no charge for delivery of goods in Philadelphia and immediate suburbs.

Canadian Shipments

Flower Seeds and Bulbs are sent "Prepaid." The complicated regulations concerning the importation of Vegetable Seeds from the United States into Canada force us, much to our regret, to decline all orders of Vegetable Seeds to be sent into Canada. All other goods are sent "Not Prepaid" by Express or Freight purchaser paying all transportation charges as well as customs duties. Recent legislation prohibits the importation into Canada of practically all kinds of nursery stock, plants, bulbs, corms, tubers, dormant roots, rhizomes, including Gladiolus, Cannas, Dahlias, Peonies, Roses, etc. Remittances from Canada must be made in U. S. funds.

Foreign Shipments

Foreign Customers will please remit in U. S. Funds. Flower Seeds, Vegetable Seeds and Bulbs quoted "Prepaid" (except Beans, Peas, and Corn) will be prepaid for regular postage but transit and surcharges as well as any costs for Consular invoices or clearance papers are to be included in the remittance. All other goods are forwarded "Not Prepaid." If mailable Roots and Plants are wanted by Parcel Post add 25% of their value to your remittance to cover postage and special packing. Minimum charge 10c. Customs duties cannot be prepaid.

Time of Shipment—All Seeds, Dormant Roots, Bulbs and Sundries are forwarded as soon after receipt of order as possible unless shipment at a later time is requested on the order sheet. Hardy Plants for the garden (Perennials, Shrubs, Hardy Vines, etc.) will be shipped at proper planting season unless otherwise specified on the order sheet.

Safe Arrival of Packages—We guarantee safe arrival of all goods sent by express or mail to any point within the United States proper. If such packages are injured or lost we will replace them as soon as notified of the fact. Goods sent in any other way travel at purchasers' risk. Claims for damages or errors must be made on receipt of goods. We cannot be held responsible for failure after delivery of goods in good condition.

The Dreer Guarantee

We guarantee the quality and vitality of Dreer's Seeds, Bulbs, and Plants purchased from this catalog at the prices quoted. If after planting them properly and under suitable conditions they fail to give satisfaction we shall cheerfully replace them at the proper planting time at one-half the original purchase price but you must notify us as soon as the deficiency becomes apparent. Because success depends upon experience, cultural practice, and climatic and soil conditions Henry A. Dreer, Inc., shall in no case be liable for more than the amount actually paid for the seeds, bulbs, and plants.

New Hardy Garden Chrysanthemum from Seed

Words are wholly inadequate to describe the exquisite beauty of these marvelous new hardy garden Chrysanthemums originated by Dreeer's and first offered this year. They are easy to grow from seed and are particularly well adapted to propagation by fall vigorous bushy plants simply covered with showy large flowers coming in an exceptionally wide and beautiful range of delightful colors. Turn to page 1 for a more complete description. The picture shows a few of the many beautiful colors which we give you a general though only partial idea as to its magnificent color range. Pkt. 60c.

New Hardy Spoon Chrysanthemums

For 1941 we are adding five new outstanding varieties of Spoon Chrysanthemums to the 3 varieties offered for the first time last year. This new type of hardy garden Chrysanthemum has been revived by gardeners everywhere with the greatest enthusiasm and the unique formation of the flowers makes them one of the most artistic of all hardy perennials for garden display, for cutting, and for exhibition purposes. Turn to page 84 for a color picture of the 5 new ones.

Dreer's New Improved Hormone-Treated LAWN MIXTURES

**Hormone
Treated
at
NO
EXTRA
COST**

Treated Untreated
Treated plant has close to three times
the root strength of untreated one.

The Hormone treatment of Dreer's Lawn Grass Seed induces quicker germination and more vigorous growth. The effect is most marked upon the roots of the young plants and as every gardener knows an extensive, well-developed root system is the foundation for a successful lawn able to withstand seasonable adversities and disease. Even with hormone treatment thorough soil preparation, fertilizing, and watering, is still very important.
